

a *Fusus* from 1,207 fathoms was similarly provided. The presence of organs of sight at these great depths leaves little room to doubt that light must reach even these abysses from some source. From many considerations it can scarcely be sun-light. I have already thrown out the suggestion that the whole of the light beyond a certain depth might be due to phosphorescence, which is certainly very general, particularly among the larvæ and young of deep-sea animals; but the question is one of extreme interest and difficulty, and will require careful investigation.

BORDÖ, KUNÖ, AND KALSÖ, FROM THE HAMLET OF VIDERÖ.
