

PLATE XIV A.

- Fig. 1. One of the superior ventral bristles (with whorls of spikes) of *Leanira japonensis*, × 250.
- Fig. 2. One of the upper and larger ordinary ventral bristles of the same, × 250.
- Fig. 3. Ventral bristle of *Leanira lævis*, × 250.
- Fig. 4. Serrated bristle, from the inferior division of the tenth foot of *Eulepis wyvillei*, × 400.
- Fig. 5. One of the powerful golden dorsal hooks, from the middle region of the body in the same species, × 100.
- Fig. 6. One of the strong winged bristles, from the inferior division of the foot, × 110.
- Fig. 7. Dorsal hook of *Eulepis challengeræ*, × 400.
- Fig. 8. Solitary pectinate bristle, from the superior edge of the inferior division of the foot of the same, × 600.
- Fig. 9. One of the short, transversely barred bristles of *Nephtys trisso-phyllus*, × 210.
- Fig. 10. One of the superior elongated bristles of the same, × 90.
- Fig. 11. A long posterior bristle from another (smaller) example, having the parasitic Infusorian attached, × 90.
- Fig. 12. Barred bristle of *Nephtys phyllobranchia*, × 400.
- Fig. 13. One of the elongated bristles of the same, × 90.
- Fig. 14. Bristle (average) in profile, from the anterior third of *Phyllodoce (Anaitis) sanctæ-vincentis*, × 800.
- Fig. 15. Antero-posterior view of one of the same, × 800.
- Figs. 16, 17. Two varieties of bristles, from the anterior third of *Eulalia capensis*, × 530.
