

PLATE XIII.

- | | PAGE |
|--|------|
| Figs 1-4. <i>CIRROTEUTHIS MAGNA</i> , n. sp., | 56 |
| Fig. 1. The dorsal cartilage, seen from the posterior aspect ; natural size. | |
| Fig. 2. The same cartilage, seen from above, showing the thin margins bending inwards over the dorsal surface so as to enclose a narrow space ; natural size. | |
| Fig. 3. Dorsal view of the cartilage of the specimen figured in Pl. XI. fig. 3 ; natural size. | |
| Fig. 4. Posterior aspect of the same cartilage ; natural size. . | |
| Figs. 5, 6. <i>CIRROTEUTHIS MEANGENSIS</i> ; n. sp., | 63 |
| Fig. 5. Posterior aspect of the cartilage of the specimen shown in Pl. XI. figs. 1, 2 ; natural size. | |
| Fig. 6. Dorsal view of the same cartilage ; natural size. | |
| Fig. 7. <i>TREMOCTOPUS QUOYANUS</i> , d'Orb., | 70 |
| Fig 7. View of the head and arms, showing about five suckers of the hectocotylished arm protruding from its sac ; magnified 3 diameters. | |
| Figs. 8, 9. <i>TREMOCTOPSIS GRACILIS</i> (?), Eydoux et Souleyet, | 71 |
| Fig. 8. The animal seen from the right ventro-lateral aspect, showing the hectocotylished arm coiled up beneath the integuments ; magnified about 3 diameters. | |
| Fig. 9. The hectocotylished arm removed from the sac ; magnified 20 diameters. α , the swelling which afterwards forms the cyst near the extremity. | |
